                                                                                                                                                                                                                             AAZ21481 to AAZ21495 represent fragments of the human sensory neurone specific 2a (SNS-2a) is a sodium channel protein. SNS-2a is a sodium channel protein. SNS-2a can be used in a method for the identification of a modulator of a sodium channel, and for assaying for compounds which modulate sodium flux. The sodium channel modulators can be used in a medicament for the treatment of pain or hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sensory neurone specific 2a; SNS-2a; sodium channel protein; pain; voltage gated; hypersensitivity; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human sensory neurone specific 2a nucleotide sequence fragment #15

The present sequence is that of cDNA encoding a novel human tetrodotoxin CC resistant sodium channel, termed NaN (see AMB20121). The cDNA was CC isolated from a human dorsal root ganglia tissue cDNA library by PCR CC amplification (see also AMF30122-23). NaN belongs to the a-subunit CC voltage-gated sodium channel protein family and produces a TTX-R sodium CC current. Such channels underlie the generation and propagation of CC impulses in excitable cells such as neurons and muscle fibres. CC Preferential expression of NaN on sensory neurons innervating the body CC (dorsal root ganglia) and the face (trigeminal ganglia), but not on other CC neurons, makes it a very useful target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed CC uses in relation to acute and/or chronic pain pathologies. A claimed CC in a human or animal subject involves administering an agent that alters sodium current flow through NaN channels, or which modulates cost transcription or translation of NaN mRNA, in dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in gene therapy to correct
                                                                                                                                                                                                                                                                                                                                                              Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          16-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5353
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 64
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1;
```

The present invention describes an expression vector comprising a nucleic acid sequence that encodes a mammalian Na v 19 sodium channel protein or its fragment, and producing a sodium current when transfected in a cell. Also described: (1) a recombinant cell comprising the plasmid selected

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (2) a method of making a cell or cell line that produces a Na v 1.9

Sodium channel-dependent sodium current by: (a) providing a cell that has the produce a cell that has cell channel-dependent sodium current by: (a) providing a cell that has cell channel conditions that allow expression vector; and (b) culturing the cell under conditions that allow expression of Na v 1.9 sodium channel protein to produce a sodium current into the transfected cell; (a) a method of screening for an agent that modulates sodium current in a cell by: (a) exposing the cell or cell line produced by the method to the agent; and (b) measuring sodium current following exposure to the agent, where an alteration in the level of sodium current is indicative of an agent cell comprising the expression vector. The expression vectors are useful for the stable cloning and expression of the Na v 1.9 sodium channel at the mann and protein levels, and for producing sodium channel currents characteristic of native currents in dorsal root ganglion neurons. The present sequence encodes a human Na v 1.9 sodium channel protein, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises the amino acid and coding sequence of three sodium channel subunits from the human nervous system (SCN12A, SCN12A-s and SCN8A). The SCN12A/SCN12A-s gene is found on chromosome 3p23-21.3 and the SCN8A gene is found on chromosome 12q13.1. The sodium ion channel subunit proteins are useful in studying physiological mechanisms relating to excitatory cells and in drug development. The sodium ion channel subunit proteins are useful for treating diseases such as familial hyperglycaemia, QT extending syndrome type 3 and motor endplate diseases. The present cDNA sequence encodes the human SCN12A sodium channel subunit

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This is the nucleotide sequence of an isolated nucleic acid which encodes CC the rat NaN channel (see AAY06596), a previously unidentified voltage gated sodium channel protein that is preferentially expressed in dorsal crot ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R cc DRG by PCR and RACE amplification (see also AAX87603-17). Rat, mouse and human NaN nucleic acids (see AAX97600-02) and polypeptides (see CC AAY06596-98) are provided. The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells that express NaN, methods for identifying agents that modulate NaN cc channel activity or NaN channel mRNA transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia cc method for using such agents to treat acute or chronic pain, paraesthesia cc and hyperexcitability phenomena. The preferential expression of NaN in cc sensory DRG and trigeminal neurons provides a target for selectively the modify of these nerve cells while not affecting other conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acids encoding sodium channels, used to develop products for treating acute or chronic pain or hyperexcitability
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Dib-Hajj S,

                                                                                                                                                                                                                                                                                                                                             The present sequence is that of cDNA encoding a novel rat tetrodotoxin CC resistant sodium channel, termed NaN (see AAB20122). The cDNA was CC isolated from a dorsal root ganglia tissue cDNA library by PCR camplification using generic primers (from conserved resions of a-subunit sodium channel proteins) and NaN-specific primers (see also AAF30105-19), CC and RACE amplification. The open reading frame shows 73% similarity to CC the human NaN sequence (see AAF30101). NaN belongs to the a-subunit CC voltage-gated sodium channel protein family and produces a TTX-R sodium current. Such channels underlie the generation and propagation of CC impulses in excitable cells such as neurons and muscle fibres. CC Preferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other current, makes it a very useful target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed current flow through NaN channels, or which modulates sodium current flow through NaN channels, or which modulates codison current flow through NaN channels, or which modulates codison current flow through NaN channels, or which modulates codisoners associated with decreased sodium channel expression or consistency to down-regulate NaN expression, in the diagnosis of disease, and in the recombinant production of NaN polypeptides
                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                               compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte

                                                                                                                                                                                             CC from privaty productions of the produces and view of the produces and view of making a cell or cell line that produces a Na view of sodium channel-dependent sodium current by: (a) providing a cell that has compared to the conditions that allow expression vector; and (b) culturing the cell cunder conditions that allow expression of Na view of the cell cunder conditions that allow expression of Na view of the cell cunder conditions that allow expression of Na view of the cell conditions that allow expression of the view of the cell conditions of the cell; (a) a method of contract of the cell of sodium current in a cell; (b) measuring sodium current following exposure to the agent, where an condition of the level of sodium current is indicative of an agent comparising the expression vector. The expression vectors are useful contracted to the stable cloning and expression of the Na view sodium channel at the mRNA and protein levels, and for producing sodium channel currents contracted the mRNA and protein levels, and for producing sodium channel currents contracted the mRNA and protein levels, and for producing sodium channel currents contracted the mRNA and protein levels, and for producing sodium channel currents contracted the mRNA and protein levels, and for producing sodium channel currents contracted the mRNA and protein levels and for producing sodium channel currents contracted the mRNA and protein levels and for producing sodium channel currents contracted the mRNA channel protein, which is contracted to the examplification of the present invention.
                                                                                  Matches

The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX). The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, traumatic injuries, AIDS-related neuropathy, and especially neuropathic pain, e.g. migraine and headache

                                                                                                                                                                                This is the nucleotide sequence of an isolated nucleic acid which encodes the mouse NaN channel (see AAY06597), a previously unidentified voltage gated sodium channel protein that is preferentially expressed in dorsal root ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R sodium current. The NaN channel cDNA was obtained from mouse trigeminal ganglia cDNA by PCR amplification using rat NaN-based primers (see AAX87660-19). Rat, mouse and human NaN nucleic acids (see AAX87600-02) and polypeptides (see AAY06596-98) are provided. The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells that express NaN, methods for identifying tissues and cells that express NaN, methods for identifying agents that modulate NaN channel activity or NaN channel mRNA transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia and hyperexcitability phenomena. The preferential expression of NaN in sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other nerve cells in the brain and spinal cord.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
The present sequence is that of cDNA encoding a novel mouse tetrodotoxin cresistant sodium channel, termed NaN (see AAB20124). The cDNA was CC isolated from trigeminal ganglia cDNA using primers (see AAF30120-21) cased on rat NaN sequences. Mouse NaN shows 68% similarity to human NaN (see AAB20121). The gene encoding NaN, termed Scnlla, is located on mouse chromosome 9. NaN belongs to the a-subunit voltage-gated sodium channel protein family and produces a TTX-R sodium current. Such channels cunderlie the generation and propagation of impulses in excitable cells such as neurons and muscle fibres. Preferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters sodium current flow through NaN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polyA_site

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 channels, or which modulates transcription or translation of NaN mRNA, in dorsal root ganglia or trigeminal neurons. NaN mucleic acids are used in gene therapy to correct disorders associated with decreased sodium channel expression or (antisense) to down-regulate NaN expression, in the diagnosis of disease, and in the recombinant production of NaN
The present invention describes an expression vector comprising a nucleic acid sequence that encodes a mammallan Na v 1.9 sodium channel protein or its fragment, and producing a sodium current when transfected in a cell. Also described: (1) a recombinant cell comprising the plasmid selected from prNaN, pCMV-rNaN-GFP, pLG338XM-rNaN and the plasmid described above;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   expression vector; Na v 1.9 sodium channel protein; sodium channel protein; dorsal root ganglion neuron; mouse; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 5822 BP; 1499 A; 1425 C;
                                                                                                                                                                                                                                                                    Expression vector useful for stable cloning and expression of Nav1.9 sodium channel at the mRNA and protein levels comprises a nucleic acsequence that encodes a mammalian Nav1.9 sodium channel protein or it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mus musculus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mouse Na v 1.9 sodium channel protein encoding cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        15-JAN-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ADD32195;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          screening for an agent that modulates sodium current in a cell by: (a) exposing the cell or cell line produced by the method to the agent; and (b) measuring sodium current following exposure to the agent, where an alteration in the level of sodium current is indicative of an agent capable of modulating sodium current in a cell; and (4) a recombinant cell comprising the expression vector. The expression vectors are useful for the stable cloning and expression of the Na v 1.9 sodium channel at the mRNA and protein levels, and for producing sodium channel currents characteristic of native currents in dorsal root ganglion neurons. The present sequence encodes a mouse Na v 1.9 sodium channel protein, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (2) a method of making a cell or cell line that produces a Na v 1.9 sodium channel-dependent sodium current by: (a) providing a cell that he been transfected with the expression vector; and (b) culturing the cell under conditions that allow expression of Na v 1.9 sodium channel prote to produce a sodium current into the transfected cell; (3) a method of

epilephy, stroke, diabetic neuropathy, traumatic injuries, AIDS-related neuropathy, and especially neuropathic pain, e.g. migraine and headache PN5. The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX). The inhibitors are potentially useful for treating Length 5334;

Rat Na v 1.9 sodium channel protein encoding cDNA SEQ IJ

NO:19

15-JAN-2004

(first entry)

expression vector; Na v 1.9 sodium channel protein; sodium channel protein; dorsal root ganglion neuron; rat; gene; ss

The present invention describes an expression vector comprising a nucleic acid sequence that encodes a mammalian Na v 1.9 sodium channel protein or its fragment, and producing a sodium current when transfected in a cell. Also described: (1) a recombinant cell comprising the plasmid selected from prNaN, pCMV-rNaN-GFP, pLG338XM-rNaN and the plasmid described above; (2) a method of making a cell or cell line that produces a Na v 1.9 sodium channel-dependent sodium current by: (a) providing a cell that has been transfected with the expression vector; and (b) culturing the cell under conditions that allow expression of Na v 1.9 sodium channel protein

to produce a sodium current into the transfected cell; (3) a method of screening for an agent that modulates sodium current in a cell by: (a) exposing the cell or cell line produced by the method to the agent; and (b) measuring sodium current following exposure to the agent, where an alteration in the level of sodium current is indicative of an agent capable of modulating sodium current in a cell; and (4) a recombinant cell comprising the expression vector. The expression vectors are useful for the stable cloning and expression of the Na v 1.9 sodium channel at the mRNA and protein levels, and for producing sodium channel currents characteristic of native currents in dorsal root ganglion neurons. The present sequence encodes a rat Na v 1.9 sodium channel protein, which is used in the exemplification of the present invention.
